Month	Renewed Stationary Sources	New Stationary Engines	Notice to Comply
January	0	3	0
February	3	0	0
March	10	3	1 SS 10 VR
Total	13	6	11

Types of Permits	2025-2026 Active Permit	Permits Discontinued
Stationary Sources	27	1
Stationary Engines	TBD	3
Vapor Recovery – Gasoline Dispensing Facility	TBD	TBD

Air Pollution Permits:

Month	Open Burning
January	16
February	11
March	10
Total	37

Permits allow the District to specify operating conditions consistent with our countywide clean air strategy and state air toxics requirements. The District has multiple permits to process to help control any device that may be a source of air contaminants or is intended to control or mitigate those air contaminants.

Emission Inventory: In-progress.

Inventory data helps identify what is being emitted into the air, by who, and where; Emissions inventory data helps to understand the sources of emissions that may contribute to adverse health risks or other impacts at the local, regional, and statewide level. CARB's "[Regulation for the Reporting of Criteria Air Pollutants and Toxic Air Contaminants](#)" (or CTR), Phase 1, Group B started this year for the District. CTR supports the mandates of AB 617, AB 197, and AB 2588 and annual reporting of criteria air pollutant and toxic air contaminant emissions data from facilities.

Requested Action: None, informational only
